Reaction products of the ethyl radical and molecular oxygen at temperatures of 100 to 300° are ethylene oxide or acetaldehyde and hydroperoxide. The surface condition of the reaction chamber strongly influences the direction of reaction of $C_2H_5 \cdot + O_2$. The formation of ethylene oxide from the reaction of the ethyl radical and a molecule of oxygen occurs on the walls of the reaction vessel treated with discharge products in water vapor. The interaction of an ethyl radical with (Chemistry-Organic, TT, v. 5, no. 9) (over)
